DETAILED ACTION

1. Claims 1-8 are presented for examination.

Claim Rejections - 35 U.S.C. § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1, 2 and 4-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Conary et al. (Conary), U.S. Patent No. 5,481,731.

As per claim 1, Conary disclose a data processing system [computer system, fig. 1] which may be situated in a reduced-power mode, comprising a first data processing unit [a processor] that has access to a memory [a cache] belonging to the first data processing unit [col. 2, lines 11-14] and a second data processing unit [devices or main memory, col. 20, lines 1-4] that has access to the memory belonging to the first data processing unit [col. 2, lines 24-29; col. 19, line 60-col. 20, line 6; col. 21, lines 52-62];

characterized in that the first data processing unit is arranged for offering the second data processing unit access to the memory belonging to the first data processing unit in a reduced-power mode of the data processing system [col. 2, lines 24-29; col. 19, line 60-col. 20, line 6; col. 21, lines 52-62].

As per claim 2, Conary discloses that the first data processing unit is arranged for offering the second data processing unit access to the memory belonging to the first data

processing unit in a period of time in which the reduced-power mode of the data processing system implies a reduced-power mode of the first data processing unit [col. 2, lines 24-29; col. 19, line 60-col. 20, line 6; col. 21, lines 52-62].

As per claim 4, Conary discloses that the memory belonging to the first data processing unit forms part of the first data processing unit [fig. 2].

As per claim 5, Conary discloses that the memory belonging to the first data processing unit is a cache memory [fig. 2; col. 4, lines 61-62].

As per claim 6, Conary discloses that the first data processing unit is a microprocessor [fig. 2; col. 4, lines 61-62].

As per claim 7, Conary discloses a video controller [a display device, col. 4, line 22. Since the computer system comprises a display device, it would have been obvious to one of ordinary skill in the art to include a video controller in order to control video display in the display device.].

As per claim 8, Conary discloses a data processing unit having access to a memory belonging to the data processing unit which data processing unit may be situated in a reduced-power mode, characterized in that the data processing unit is arranged for offering access in the reduced-power mode to the memory belonging to the data processing unit [col. 2, lines 24-29; col. 19, line 60-col. 20, line 6; col. 21, lines 52-62].

4. Claim 8 is rejected under 35 U.S.C. 102(b) as being anticipated by Carmean et al. (Carmean), U.S. Patent No. 5,669,003.

As per claim 8, Carmean discloses a data processing unit having access to a memory belonging to the data processing unit which data processing unit may be situated in a reduced-

power mode, characterized in that the data processing unit is arranged for offering access in the reduced-power mode to the memory belonging to the data processing unit [col. 6, lines 11-22; col. 7, lines 58-63].

Allowable Subject Matter

5. Claim 3 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
